

# The Road to Agile

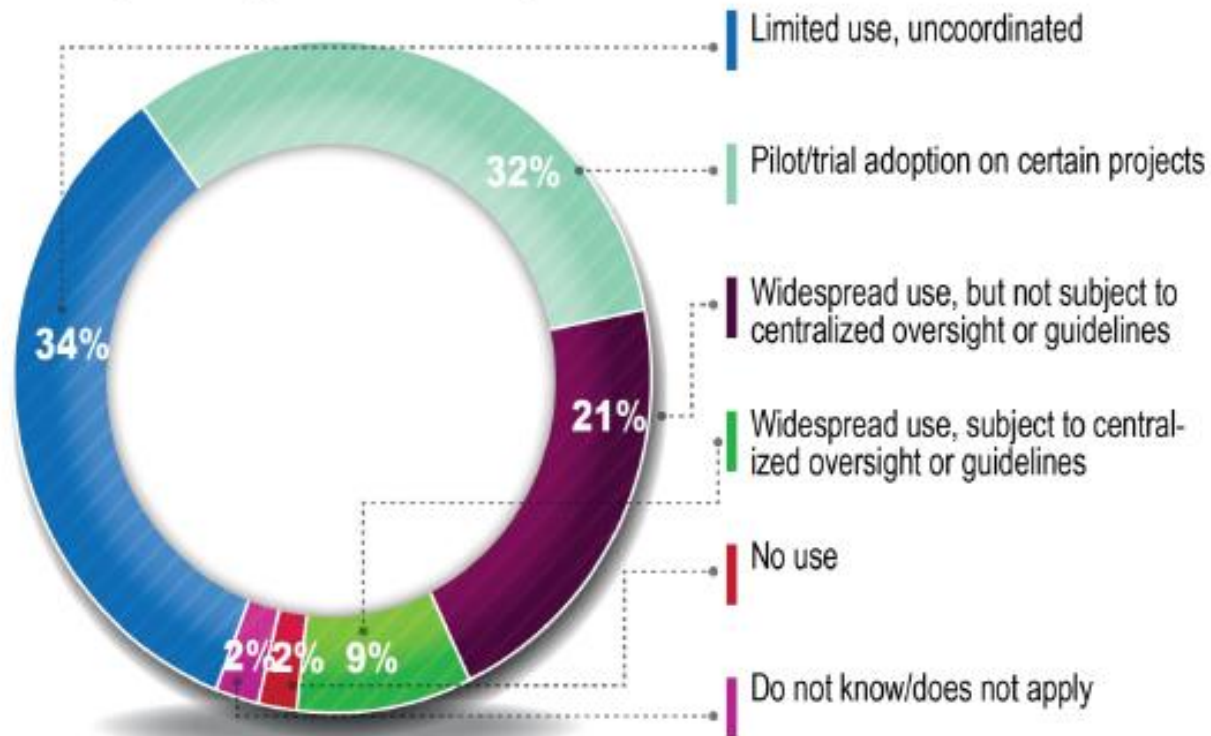

## PennDOT's Transformation to Iterative and Agile Methods

Chris de Leon and Philip Petrina  
Pennsylvania Department of Transportation

# Agile Adoption

How would you characterize the use of agile or incremental software development approaches within your state?

Source: The Value Equation, 2015 State CIO Survey

# Why Go to Iterative and Agile?

- Rapid Growth Driven by:
- Disruptive IT Forces
  - IT Strategy
  - Business Needs for Transformation and Innovation

# Where We Were: Waterfall Development

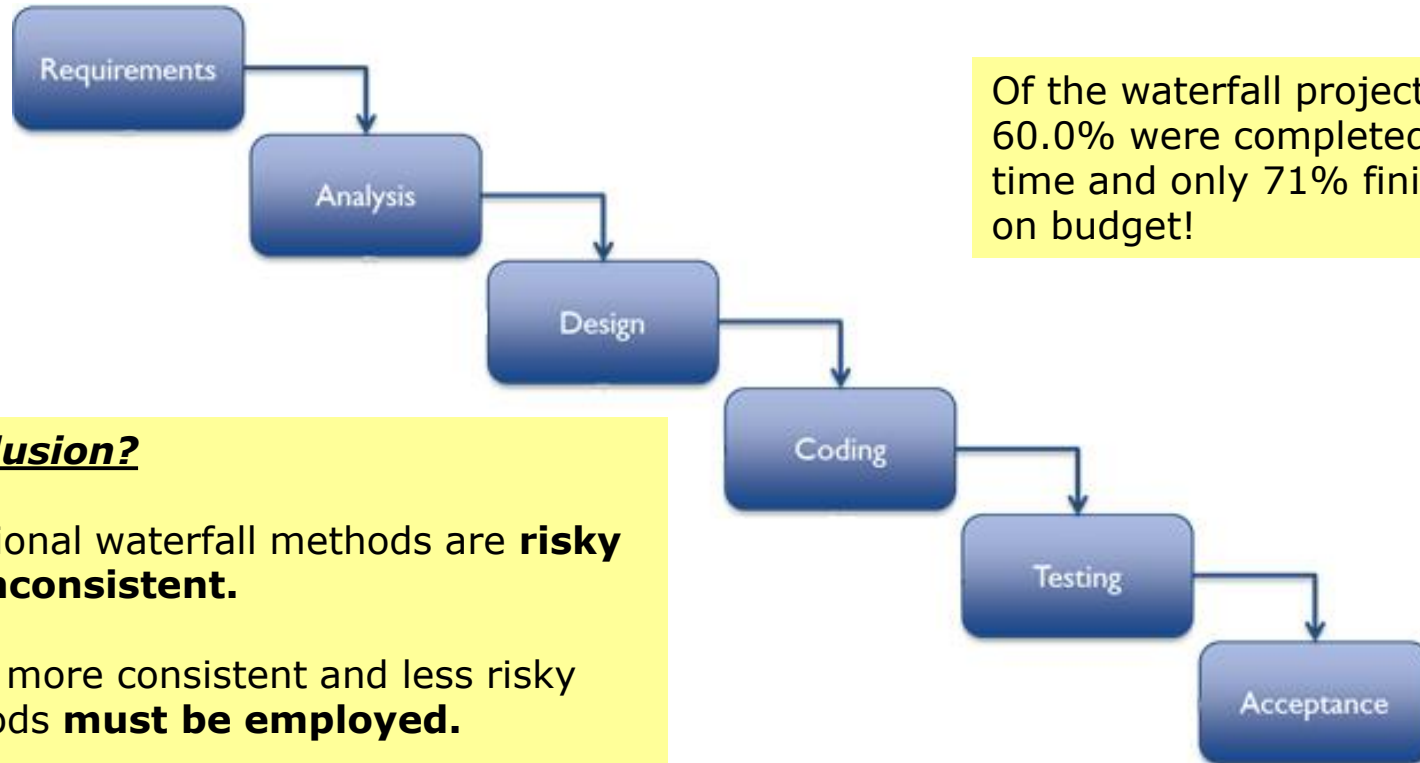

- Gartner: In 2015, **Waterfall** methods were used in approximately 56% of projects; 21% used **Iterative** and 23% use **Agile** <sup>1</sup>.

<sup>1</sup> "The End of Waterfall as We Know It", Gartner Research; Analysts: Matthew Hotle, David Norton and Nathan Wilson; G00291841

# Waterfall Development Methodology

## **Conclusion?**

Traditional waterfall methods are **risky** and **inconsistent**.

Other more consistent and less risky methods **must be employed**.

Need to Deliver Business Value  
**Quicker** and with **Higher Quality**

➤ ***Iterative and Agile***

# Iterative Development Methodology

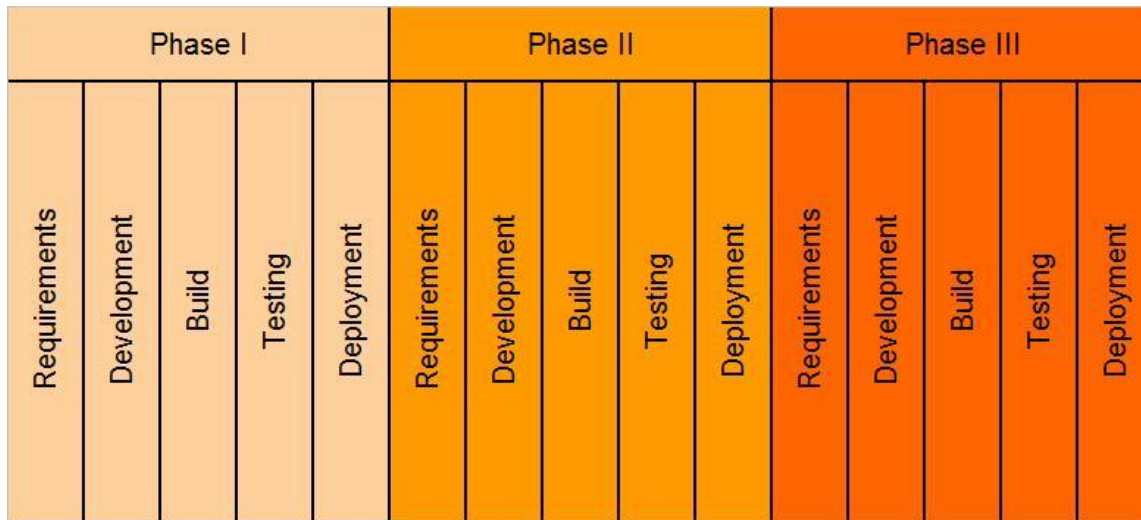

Figure 3: Iterative Development Model

- Breaks the project down into iterations or phases.
- Each iteration has its own lifecycle
- Reduces risk of changing requirements

#### Caveats:

- The longer the iteration, the greater the risk.
- Iteration schedule may slip because all requirements within an iteration must be completed

# Agile/SCRUM Project Methodology

## Pros:

1. Faster Delivery
2. Easier to adapt to change
3. Builds strong teams
4. Avoids requirements surprises
5. Higher quality results

COPYRIGHT © 2005, MOUNTAIN GOAT SOFTWARE

## Cons:

1. Agile requires a significant culture shift
2. Agile does not always conform with traditional large org performance metrics; effort estimations can be difficult

# Build a Solid Foundation

- Stakeholder Training/Education Plan
  - ✓ Introductory and Advanced training
  - ✓ Include developers, BAs, PMs, and **Business Areas**
  - ✓ Share Knowledge; Shadowing of Iterative and Agile Teams
  - ✓ Develop a presentation you can give quickly to internal or external stakeholders

# How can the organization transition to iterative and agile?

- Good News – You're probably already doing it
  - ❑ Iterative is a common software development methodology in most organizations
  - ❑ Waterfall teams can easily adapt to iterative
  - ❑ First step to being more agile
- Look for easy victories to garner support within IT and the business areas
- Start adopting agile practices across the organization
  - ❑ Be More Agile
  - ❑ Shorter delivery cycles
  - ❑ Put software in the hands of the business more frequently to avoid the big up-front design and development trap.

# How can the organization transition to iterative and agile?

- Avoid waterfall if at all possible!
  - ❑ Waterfall (the old way)– Gather **all** requirements up front, IT go to the IT cave and build it; return in 12-14 months with 100% finished product !!!
  - ❑ If waterfall must be used, duration should be limited to 90-120 days.
  - ❑ May need to use iterative waterfall for larger projects
- Assess new projects for iterative or agile approaches.
  - ❑ Use iterative or agile whenever possible
  - ❑ Project Team Agrees on method
  - ❑ Set Expectations Accordingly
  - ❑ Remember, not all projects or project teams are suited to agile methodology

# Agile Manifesto

## Main Focus

- ***Individuals and interactions*** over processes and tools
- ***Working software*** over comprehensive documentation
- ***Customer collaboration*** over contract negotiation
- ***Responding to change*** over following a rigid plan

While there is value in the items on the right, we value the items on the **left** more!!

# How can the organization transition to iterative and agile?

- It won't happen overnight
  - Moving to agile is more about **cultural change and people**, not process and technology
  - "Walk" into an agile transition with eyes wide open
  - Use a pilot project, don't go "Big Bang Theory" here
- Continue to use Iterative and Agile or Hybrid methods that work for your organization (remember, it's a journey)
- Success breeds Success

# “Open the Road” to Agile

- Have a Champion (Senior Management)
- Identify, recruit, train and cultivate your agile team

**Early Adopters from IT and Business will Open the Road**

# First Pilot Agile Product

- Pick a small non-critical project, and learn from the results. The experience gained from the pilot project can be used to adjust processes
- Collocate the team if possible
- Gather major features or functionality (formally requirements)
  - BA's/Dev team go to the field to observe operations
- Prioritize Backlog – This is a Business not IT function !!!!
  - What are most important features that will offer the most value in short order to the business. (MVP)
  - Plan Sprints
- Deliver working software/features by the end of every sprint
- Sprint Retrospective
- RINSE and REPEAT

# Agile team visits the work site

# Other Factors to Consider

- Agile development methods require committed business involvement
  - Business participates in Daily SCRUM meetings
  - Use of Business Pilot Groups
    - Continuous Testing throughout each Sprint
    - Reduces User training significantly
- Be ready to accept and embrace **CHANGE**
- We don't always have **ALL** the requirements up front
