2016 Agile Project and Portfolio Summit
Harrisburg University

Rally Software is now part of CA Technologies

Mememes!

**I dont always exceed my
kanban WIP limit**

**But when i do,
i pull 39 stories at once**

AM I THE ONLY ONE AROUND HERE

WHO RESPECTS THE WIP LIMIT?

Me (without gray hair)

You?

Why a presentation on metrics?

Why a presentation on metrics?

Too many organizations don't measure
anything

Why do we measure?

Why do we measure?

**If you can't measure it, you can't
manage it**

What are metrics for?

What are metrics for?

Finding your problems
(aka Continuous Improvement)

**For feedback to improve your own
performance**

Virtue vs Sin

**As a lever to drive someone else's
behavior**

**What's the most
important measurement
in Agile?**

What's the most important measurement in Agile?

Working software is the primary measure of progress.

9,192,631,770

9,192,631,770

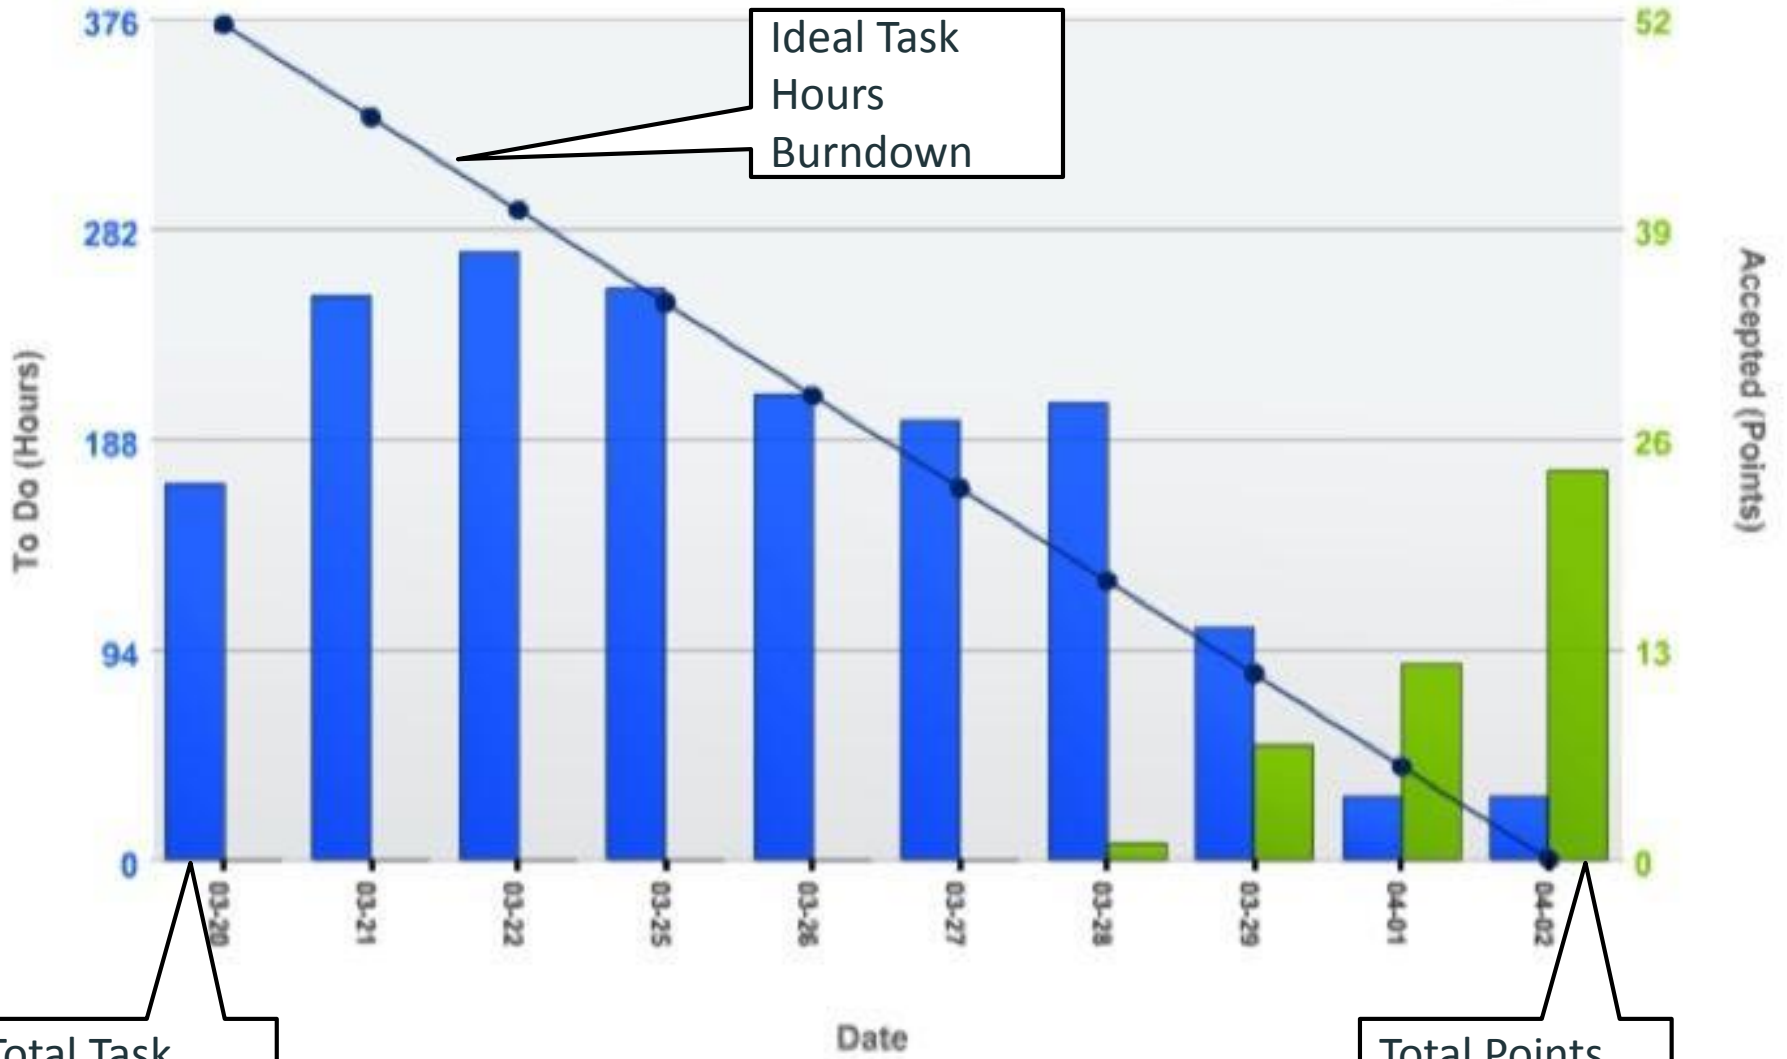

**Don't be fooled by the fallacy of
precision**

Let's look at some practice metrics

Iteration Burn Down

Ideal Task Hours Burndown

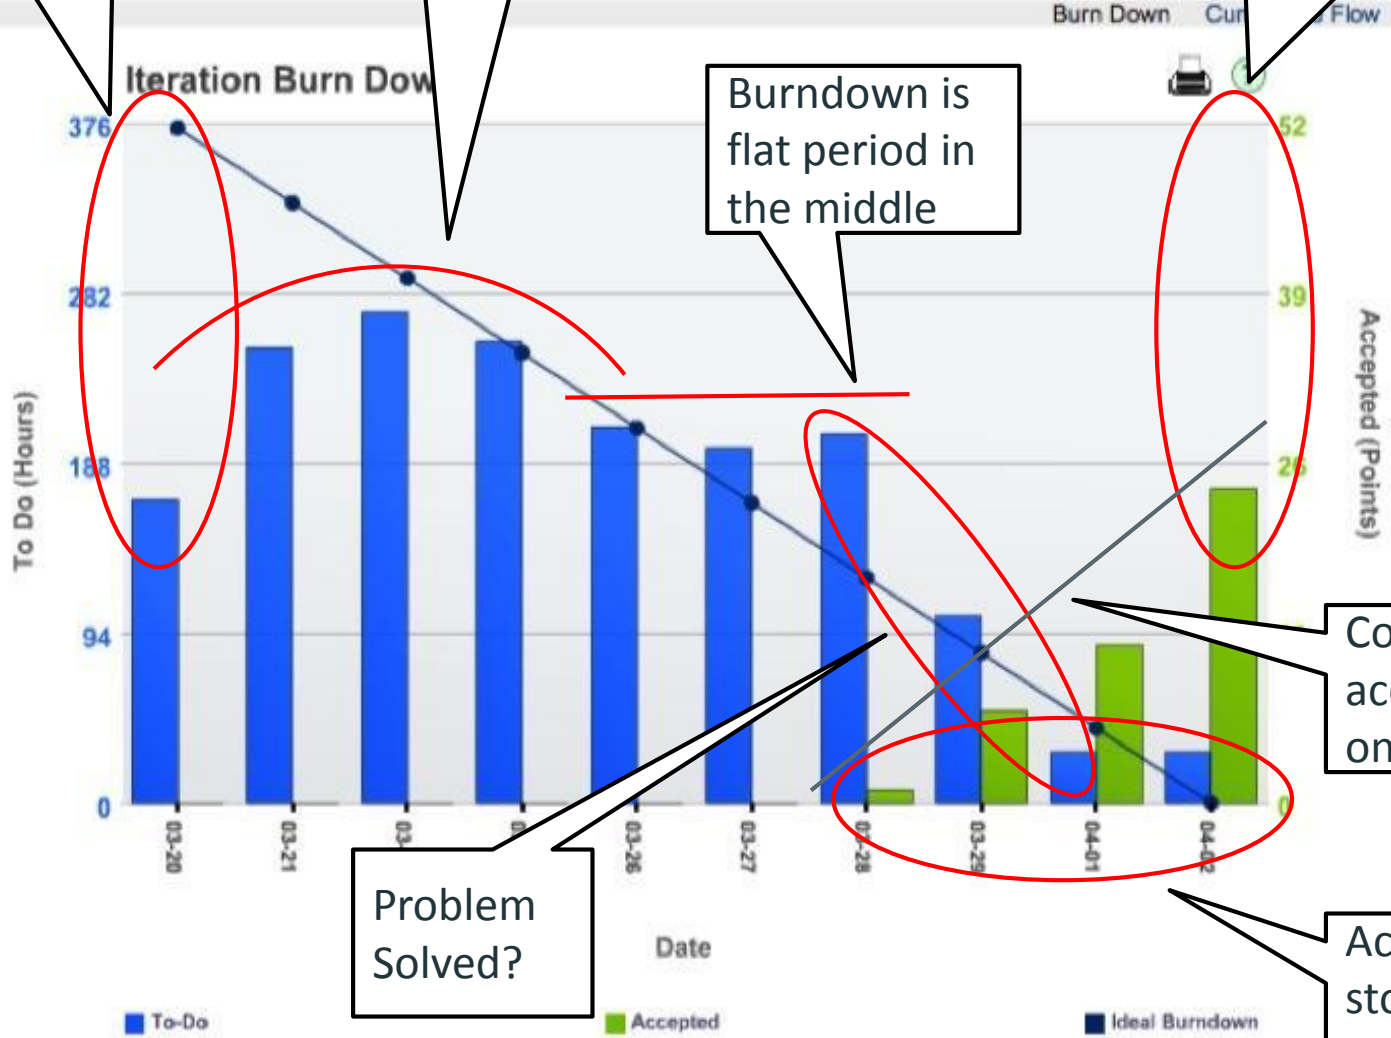

Total Task Hours To Do

Total Points Accepted

Unfinished iteration planning

Remaining work has peaked

Accepted half of user stories planned

Burndown is flat period in the middle

Consistent acceptance once started

Problem Solved?

Accepted user stories late in iteration

Iteration Cumulative Flow

Iteration Cumulative Flow

Work carried over from previous iteration

Drop in work on 7th day

Plan Estimate

Incomplete acceptance

Lots of Work in Progress

Late acceptance

Date

Agile
COACH

Considerations

- You're an Agile coach
- Arrived today
- Know no history
- Have the metrics

- What do we see in the data?
- What would we recommend?

Scenario 1

- Company 1
 - Large engineering program (15 Teams)
 - Adopted SAFe (Scaling Agile)
- Team 1 Data:
 - Velocity - Iteration 2.3 thru 5.3
 - Iteration 5.1, 5.2 & 5.3

Scenario 1 - Team 1 - Velocity

Velocity Chart

Team 1

Team 1 ↓

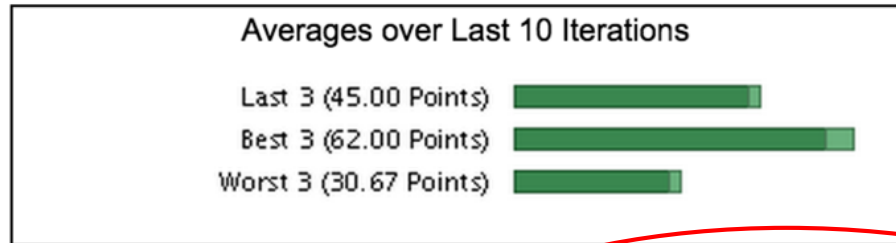

Scenario 1 - Team 1 - Velocity

Velocity Chart

Scenario 1 - Team 1 - Iteration 5.1

Iteration Burndown

Team 1 ↓ Iteration 5.1

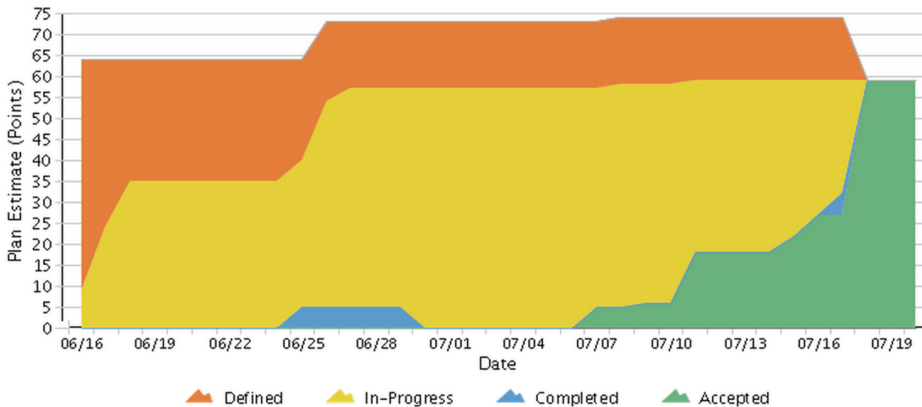

Select an iteration: Team 1

Iteration Burndown

Iteration Cumulative Flow Diagram

Team 1 - Iteration 5.1

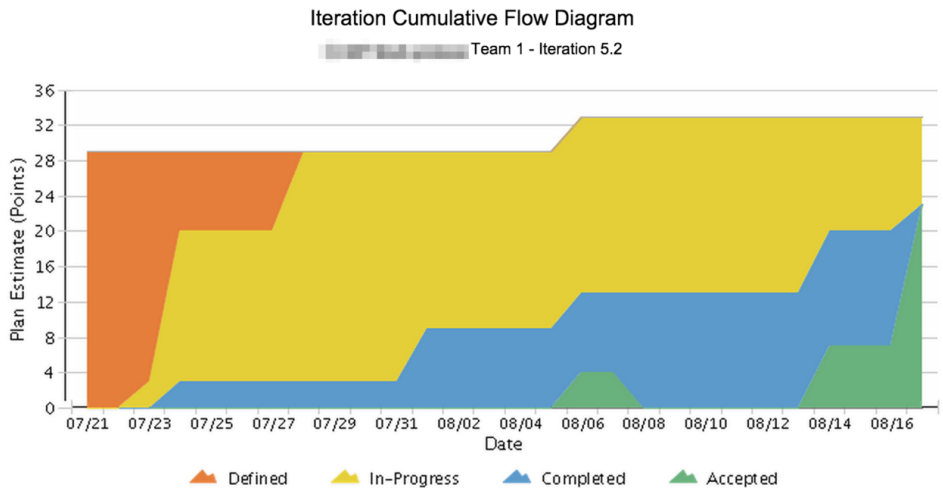

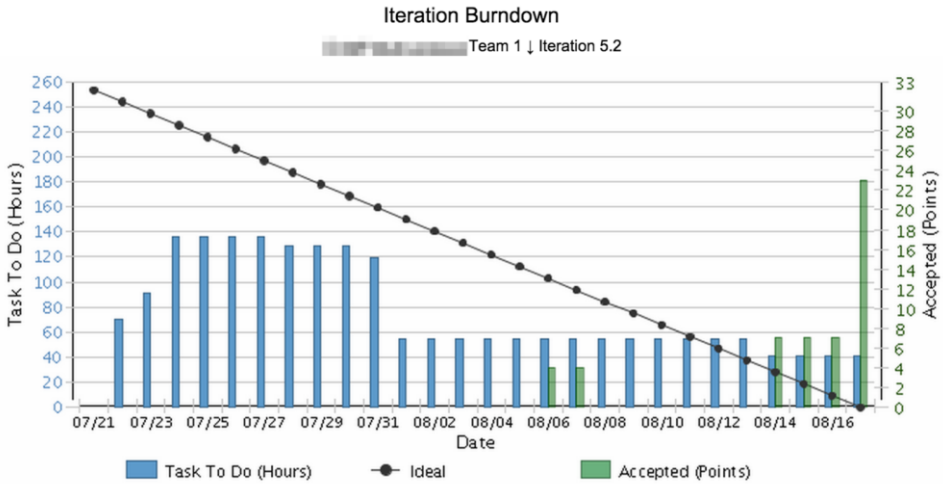

06/16/2014 - 07/20/2014 (35 Days, Done)

	Count	Points
+ Total Added	4	17.0
- Total Removed	1	9.0
Net	3	8.0

Scenario 1 - Team 1 - Iteration 5.2

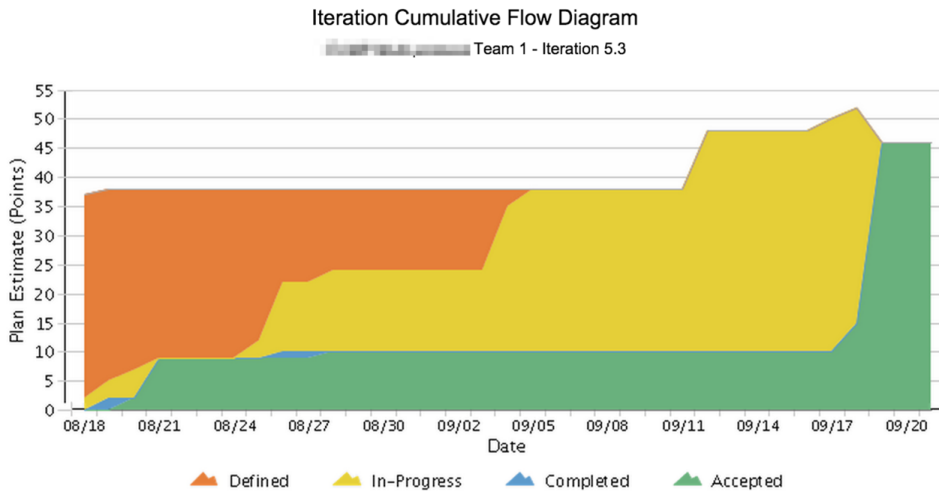

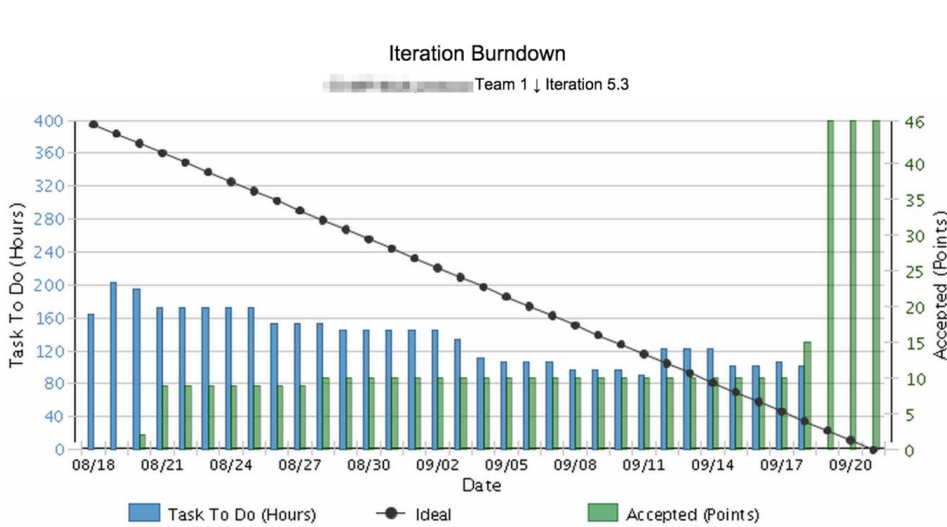

Select an iteration:

07/21/2014 - 08/17/2014 (28 Days, Done)

	Count	Points
+ Total Added	9	22.0
- Total Removed	5	14.0
Net	4	8.0

Scenario 1 - Team 1 - Iteration 5.3

08/18/2014 - 09/21/2014 (35 Days, Done)

	Count	Points
+ Total Added	25	55.0
- Total Removed	14	28.0
Net	11	27.0

Scenario 1 - Observations

Team 1

- Inconsistent Velocity
- Acceptance work at iteration end
- Lots of WIP
- Not planning iteration well
- Adding scope during iteration
- Changing iteration length

Scenario 2

- Same Company 1
 - Large engineering program (15 Teams)
 - Adopted SAFe (Scaling Agile)
- Team 2 Data:
 - Velocity - Iteration 2.3 thru 5.3
 - Iteration 5.1, 5.2 & 5.3

Scenario 2 - Team 2 - Velocity

Velocity Chart **Team 2**

Scenario 2 - Team 2 - Iteration 5.1

Iteration Burndown

Iteration 5.1

Select an iteration: Iteration 5.1

Iteration Burndown

Iteration Cumulative Flow Diagram

Iteration 5.1

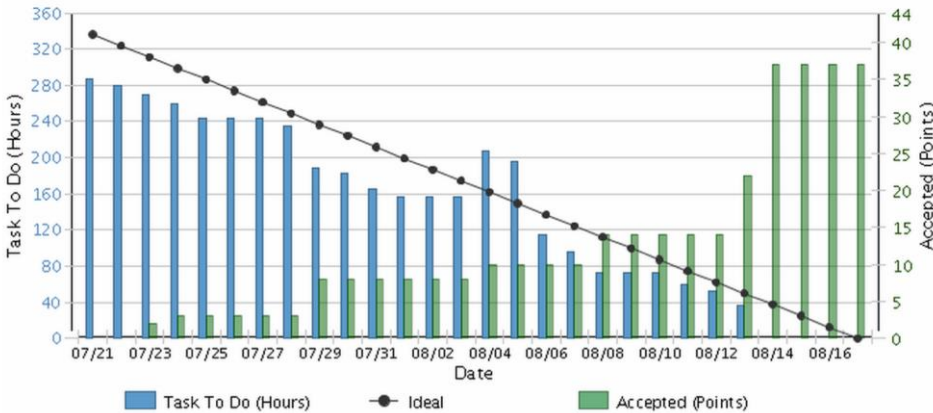

06/16/2014 - 07/20/2014 (35 Days, Done)

	Count	Points
+ Total Added	5	13.0
- Total Removed	8	24.0
Net	-3	-11.0

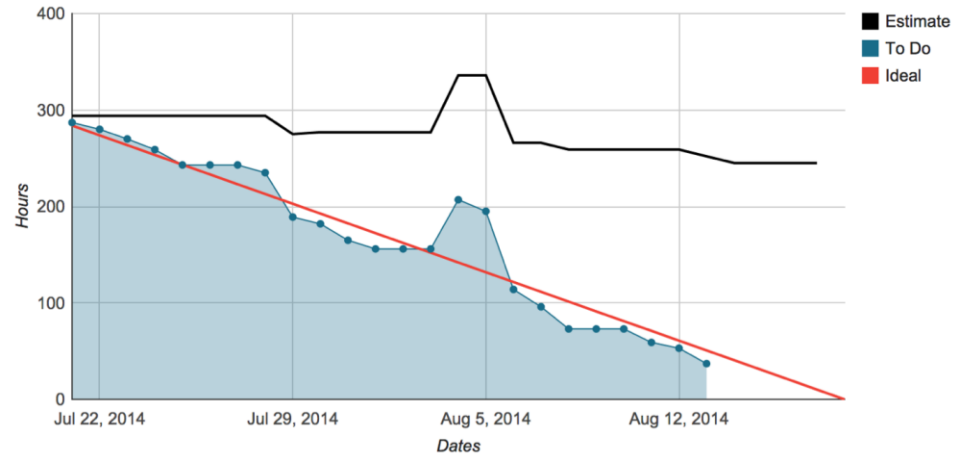

Scenario 2 - Team 2 - Iteration 5.2

Iteration Burndown
Team 2

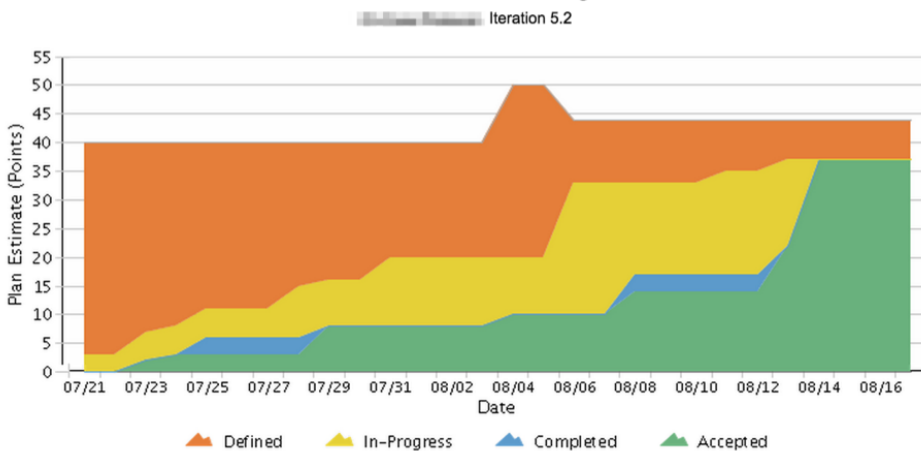

Select an iteration: Iteration 5.2

Iteration Burndown

Iteration Cumulative Flow Diagram

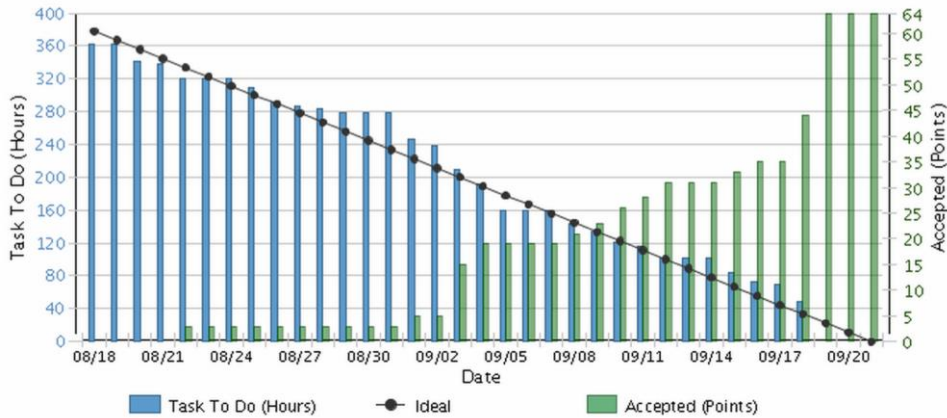

07/21/2014 - 08/17/2014 (28 Days, Done)

	Count	Points
+ Total Added	14	57.0
- Total Removed	13	50.0
Net	1	7.0

Scenario 2 - Team 2 - Iteration 5.3

Iteration Burndown

Iteration 5.3 Team 2

Select an iteration: Iteration 5.3

Iteration Burndown

Iteration Cumulative Flow Diagram

Iteration 5.3

08/18/2014 - 09/21/2014 (35 Days, Done)

	Count	Points
+ Total Added	3	16.0
- Total Removed	5	21.0
Net	-2	-5.0

Scenario 2 - Observations

Team 2

- Good velocity, trending upward
- Not entering defects
- Early acceptance of work
- Better control of WIP
- Good planning of iteration
- Consistent scope during iteration
- Changing iteration length

Scenario 3

- Same Company 1
 - Large engineering program (15 Teams)
 - Adopted SAFe (Scaling Agile)
- Team 1 vs 2 Data:
 - Impact of changing timebox length

When are these the same?

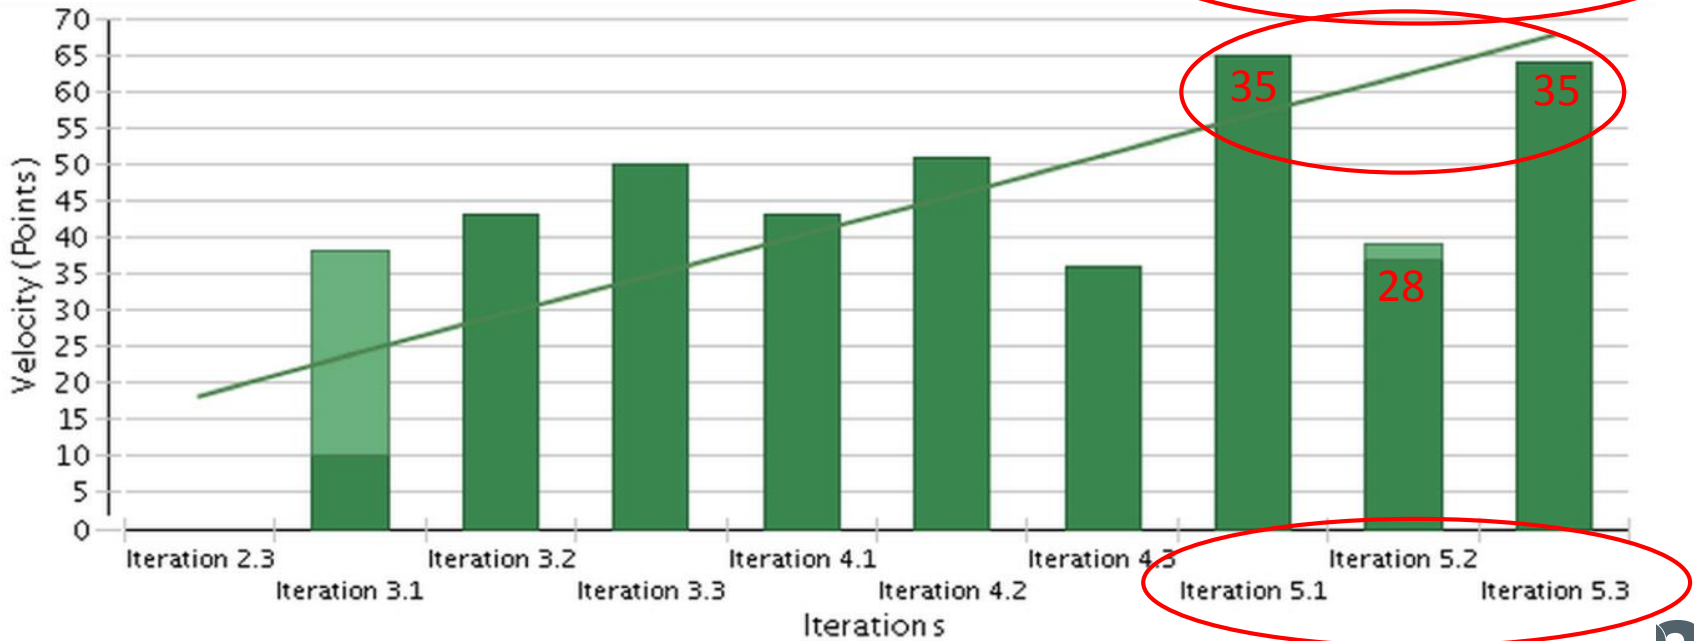

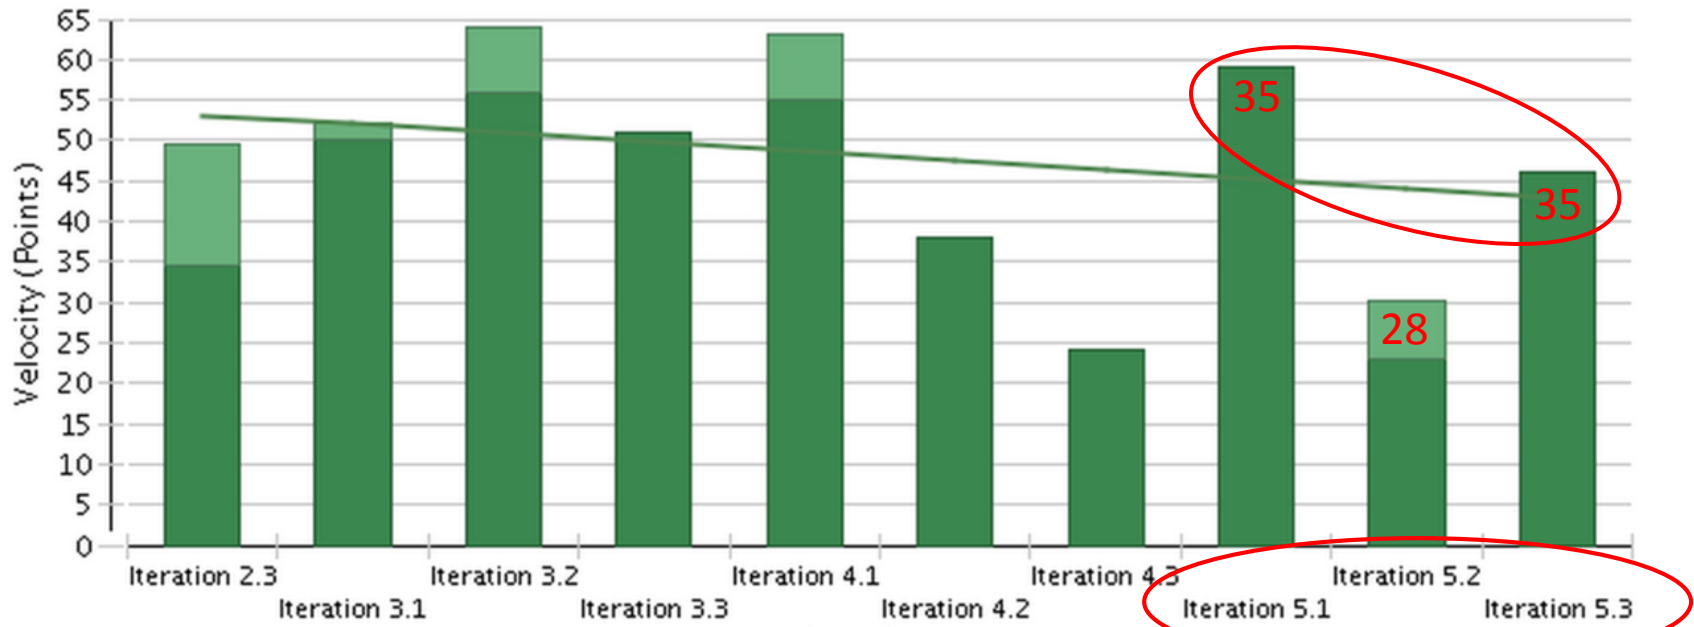

When are these the same?

/ hour

/ hour and a half

Accepted during Iteration
 Accepted after Iteration
 Not Accepted

Scenario 3 - Observations

Team 1 vs 2

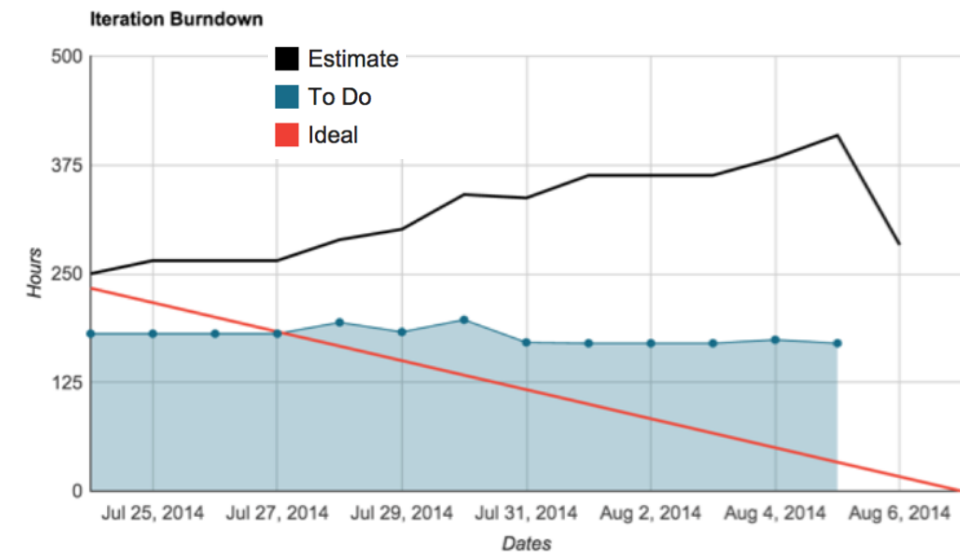

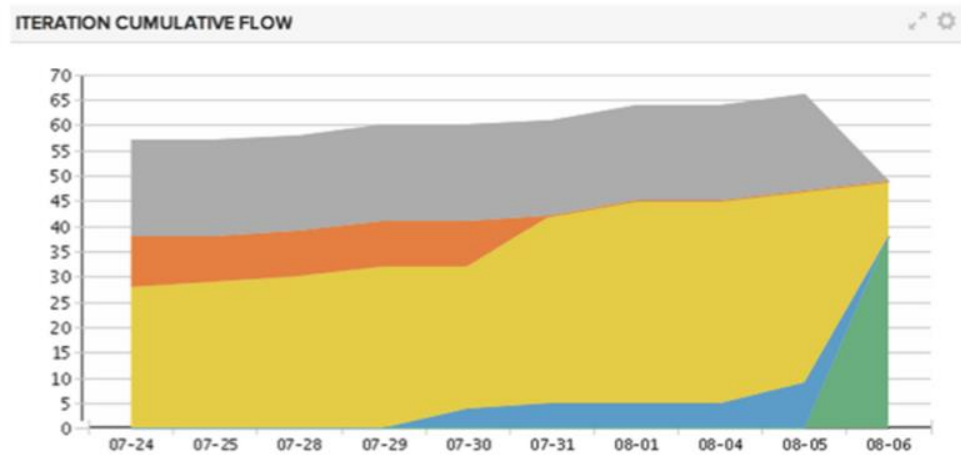

- DON'T CHANGE TIMEBOX!!!

Scenario 4

- New Company!!!
 - Single Agile Team
 - Practicing Agile for 2 years
 - Dedicated ScrumMaster
 - Distributed team
 - 2 wk sprints; 3 mo releases
- Single Team Data:
 - Single Iteration
 - Entire Release

Scenario 4 - Iteration

Iteration Health << 2.7.3.00 - Sprint 1 >>

Scenario 4 - Iteration

Iteration Health << 2.7.3.00 - Sprint 1 >>

Scenario 4 - Release

Release Cumulative Flow Diagram

el-9 Scrum Team ↓ el-9 2.7.3.00

Scenario 4 - Observations

Iteration

- Task actuals increase
- Task burndown flat
- Late acceptance
- Work carrying over from previous iterations
- Unfinished work moved to next iteration
- Iterations are consistently over committed
- Iterations velocity is consistent, but obviously lower than what the scope of the release is.

Release

- Shows the inconsistent nature of acceptance and late acceptance.
- Release burndown depicts that work is getting done at the same rate as it is being added.
- However, there is a gap between remaining and scope at the end of the release.

What would we recommend?

Scenario 5 - Expert Level

- New-New Company!!!
 - Single Agile Team
 - Practicing Agile for 2 years
 - Dedicated ScrumMaster
 - 2 wk sprints; 3 mo releases
- Single Team Data:
 - Single Iteration
 - Entire Release

Scenario 5 - Expert Level
